
The **X-Stream Leadership** Approach to Lean Six Sigma...
Taking the Evolutionary into the Revolutionary!

Everyone knows that learning statistics and data analysis can be boring, scary, and even frightening. Who wants to sit and look at slides and listen to a monotonous instructor all day...Right?!

X-Stream has taken the traditional Three-Day / Yellow Belt Course and updated the information with more hands-on activities and exercises and fewer slides to help you better understand how the different tools work. They have also incorporated the latest Minitab program to do MOST of the statistics for you as well! We “blend” Lean, Six Sigma, and the Theory of Constraints to provide you with the most robust and effective methodology in the world today! Each approach can result in dramatic improvement, but by utilizing all three methodologies, you will help identify and solve problems directly related to the bottom line of your company.

X-Stream keeps the information basic and simple to understand combined with his unique teaching style, makes the classes more informative and enjoyable.

Our **X-Stream** Instructors are very involved with each student and their projects every step of the way! Their passion to see each student succeed shines through in the time they take to make sure EVERY student understands each principle before moving on to the next subject.

“It’s awesome to listen to JR as he takes his life experiences and weaves them into a lesson, customized just for you, and watch as the students sit up a little straighter as the “AHA” lightbulb comes on, and the “I’ve got it” crosses their faces!” Testimonial

“I have to admit that while I entered this class with much trepidation and fear, that I enjoyed being a part of the group for the statapult project. Being part of the team as they created a process and flow map for a satellite business, learning to communicate through the departments, figuring out where the problems are and correcting them together in order to get the process to flow quickly and smoothly so that the customer is satisfied with the end product, has been an education and experience I will never forget along with the new found friends that I have made!” Testimonial

Because of our Master Instructor’s passion to see the students or businesses they are working with succeed, it is moving to see the PRIDE shining in their eyes as they watch the “AHA, I’ve got it!” light up the student’s faces.

These students (kids) truly are our future, and our Master Instructors will do whatever it takes, from beginning to end and in between, pushing you if necessary, so that you can succeed, in “ALL” aspects of your life.

X-Stream Leadership Group training uses an adult-based interactive set of tools and exercises to drive home this message. **In the Three-day Yellow Belt Course, the level of detail is designed to ensure your team**

members develop a basic understanding of the fundamentals of LEAN, Six Sigma, and the Theory of Constraints and are prepared to become effective members of an improvement team or event. We will work with your team to develop specific examples from your business and tailor the exercises and scenarios for your organization.

X-Stream Leadership Group will show during the Three-Day Yellow Belt Course how these principles are utilized to develop a new process that meets delivery schedules, produces defect-free output, and delivers the lowest cost to ensure the greatest possible ROI.

Once the Lean principles are fully explained, the training moves into the structure used to support the principles of Customer Value, Value Stream, Flow, Pull, and Perfection. We also fully integrate and implement the DMAIC process of Define, Measure, Analyze, Improve, and Control.

The *X-Stream Leadership Group* training course also discusses what will be required of your leadership team to implement, support, drive, and fully sustain process improvements.

There are multiple reasons for any organization to push for the cultural change required to achieve a waste-free, variation-free system of work. Any organizational change will become less strenuous if the leadership team understands both the personal and professional motivation to make change happen and why people resist that change. This is why we incorporate Change Management and Understanding Resistance to Change, to our training program. This provides you with a stronger understanding of how to successfully implement ANY new change initiative in your organization!

This final section of the training will discuss an extremely important topic, “Roles and Responsibilities”. The roles and responsibilities include the following:

- Green Belt roles
- Black Belt roles
- Team Leader roles
- Sponsor or Process Owner roles
- Executive Champion roles

The entire three-day session is set in the Adult Based Learning Style which provides for all learning styles including visual, auditory, reflective, and kinesthetic. *X-Stream Leadership Group* advocates participatory training, so the audience is encouraged to ask questions, share experiences or provide feedback during the entire day.

Lean Six Sigma can dramatically improve your productivity, cost, and quality of service.

Typical LST results in the manufacturing environment range from 20-40%.
When we also engage your business-operation/office functions, results spike to 50-85%.
